Enzyme QMS

# Core Plan

Whether you're looking for your first QMS, or to upgrade from a paper-based or non-Part 11 compliant solution, Enzyme QMS has everything you need. Even better, it's validated out-of-box. At the core of Enzyme QMS is document control, training, and approvals. Why? Because every key quality activity goes through one or more of these modules. And because we offer premarket and postmarket modules as well, our software can scale as you scale, meaning you'll never have to migrate to another QMS, ever.

## Document Control

Enzyme QMS is a 21 CFR Part 11 compliant solution that allows you to draft, review, approve, and obsolete documentation while still letting you edit in the tool of your choice. Our industry-leading number of integrations means you can keep using the tools you love.

- Automatically generate controlled PDFs and redlines* from all Microsoft/Google documents, spreadsheets, presentations, and PDFs you upload or sync
- Organize documents using our foldering system* and set permissions at a folder or document level* as needed
- Automatically maintain an electronic version history for every document

## Change Control

Replace insecure and time-heavy paper and spreadsheet processes with automatic, digitized change control and record-keeping with Enzyme QMS.

- Connect your team to Enzyme via our Slack integration* and always know when a new approval request requires your attention
- Set Approval Settings based on document types to ensure the right people are reviewing and approving the right documents
- Delegate your approval to others* when you are unavailable
- Fix typos without up-reving a document or triggering training*

## Training

With role-based curricula, quizzes, and internal and external training, Enzyme has everything you need to ensure your team is up-to-date and your training records are complete.

- Automatically-assign training based on roles* and when documents are updated
- Use email and Slack reminders* to ensure staff complete training on time
- Create quizzes* to demonstrate comprehension

Enzyme

Serving teams from 2 to 2,000, premarket to postmarket, startup to enterprise, Enzyme is the only QMS you'll ever need — or want.

*Features not offered by most other QMS solutions
